ELECTRONIC FILING

Mr. Adam J. Teitzman, Commission Clerk Office of Commission Clerk Florida Public Service Commission 2540 Shumard Oak Boulevard Tallahassee, Florida 32399-0850

Re: Docket 20240026-EI; Petition for Rate Increase by Tampa Electric Company

Dear Mr. Teitzman:

Attached for filing on behalf of Tampa Electric Company in the above-referenced docket is the Direct Testimony of Lori Cifuentes and Exhibit No. LC-1.

A portion of Exhibit No. LC-1 contains proprietary confidential business information and is being filed simultaneously under separate cover with an accompanying Request for Confidential Classification.

Thank you for your assistance in connection with this matter.

(Document 11 of 32)

Sincerely,

Jahr

J. Jeffry Wahlen

1		BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION	
2		PREPARED DIRECT TESTIMONY	
3		OF	
4		LORI CIFUENTES	
5			
6	Q.	Please state your name, business address, occupation, and	
7		employer.	
8			
9	A.	My name is Lori Cifuentes. My business address is 702 North	
10		Franklin Street, Tampa, Florida 33602. I am employed by	
11		Tampa Electric Company ("Tampa Electric" or the "company")	
12	as Director Load Research and Forecasting in the Regulatory		
13		Affairs department.	
14			
15	Q.	Please describe your duties and responsibilities in that	
16		position.	
17			
18	A.	My present responsibilities include the management of Tampa	
19		Electric's customer, peak demand, energy sales, and revenue	
20		forecasts, as well as management of Tampa Electric's Load	
21		Research program and other related activities.	
22			
23	Q.	Please provide a brief outline of your educational	
24		background and business experience.	
25			

In 1986, I received a Bachelor of Science degree in 1 Α. Management Information Systems from the University of South 2 3 Florida. In 1992, I received a Master of Business Administration degree from the University of Tampa. In 4 5 October 1987, I joined Tampa Electric as a Generation Planning Technician, and I have held various positions 6 within the areas of Generation Planning, Load Forecasting, 7 and Load Research. In November 2018, I was promoted to my 8 current postion. 9 10 Outside of Tampa Electric, I am also actively involved in 11 several forecasting-related organizations. I am actively 12 the Electric Utilities Forecaster involved in Forum 13 14 ("EUFF"), which is an organization made up of electric utility forecasters from across the nation that meet twice 15 16 a year to discuss forecasting issues and challenges. I held the position of President of the EUFF from 2008-2014. In 17 addition, from 2009-2014 I was the chairperson for the 18 Florida Reliability Coordinating Council, Inc.'s ("FRCC") 19 20 Load Forecast Working Group and coordinated the review of Florida utilities' load forecasting methodologies 21 and 22 demand and energy forecasts that support the Peninsular 23 Florida Load and Resource Plan and reliability assessments. 24

25

Q. What are the purposes of your direct testimony?

	l I	
1	A.	The purposes of my direct testimony are (1) to describe
2		Tampa Electric's load forecasting process; (2) to describe
3		the methodologies and assumptions used for the forecast;
4		and (3) to present the load forecast used in Tampa
5		Electric's test year budget that supports its request for
6		a base rate increase. Additionally, I will demonstrate how
7		the forecasts are appropriate and reasonable.
8		
9	Q.	Have you prepared an exhibit to support your direct
10		testimony?
11		
12	A.	Yes. I am sponsoring Exhibit No. LC-1 consisting of 11
13		documents, prepared under my direction and supervision.
14		The contents of my exhibit were derived from the business
15		records of the company and are true and correct to the best
16		of my information and belief. My exhibit consists of the
17		following documents:
18		
19		Document No. 1 List of Minimum Filing Requirement
20		Schedules Sponsored or Co-Sponsored by
21		Lori Cifuentes
22		Document No. 2 Comparison of 2021 Forecast Versus
23		Current Forecast of Customer Growth
24		and Energy Sales
25		Document No. 3 Economic Assumptions Average Annual

1			Growth Rate
2		Document No. 4	Billing Cycle Based Degree Days
3		Document No. 5	Customer Forecast
4		Document No. 6	Per-Customer Energy Consumption
5		Document No. 7	Retail Energy Sales
6		Document No. 8	Per-Customer Peak Demand
7		Document No. 9	Peak Demand
8		Document No. 10	Firm Peak Demand
9		Document No. 11	Firm Peak Load Factor
10			
11	Q.	Are you sponsoring a	any sections of Tampa Electric's Minimum
12		Filing Requirement	("MFR") Schedules?
13			
14	A.	Yes. I sponsor or	co-sponsor the MFR Schedules shown in
15		Document No. 1 of m	y exhibit.
16			
17	FORE	CAST OVERVIEW	
18	Q.	Please summarize th	e forecast results.
19			
20	A.	In my direct testin	mony, I present forecasts that reflect
21		the recent growth	n trends in the company's service
22		territory. Tampa E	lectric's sales trends are consistent
23		with the sales tren	ds of other utilities in Florida.
24			
25		The company expect	s customer growth to increase at an

average annual growth rate ("AAGR") of 1.4 percent over 1 the next ten years (2024-2033); however, we project the 2 3 average customer use to decline during that period. Since 2014, per-customer consumption has declined at an AAGR of 4 5 0.6 percent, and we expect it to decline at an AAGR of 0.5 (0.4 percent excluding the volatile Phosphate 6 percent 7 sector) over the next ten years. Given the forecasts for 1.4 percent customer growth and 0.5 percent average per-8 customer use decline, the company expects retail energy 9 sales to increase at an AAGR of 0.9 percent during the 10 11 forecast horizon (1.0 percent excluding the volatile Phosphate sector). 12 13 14 Q. Please explain the company's experience with load growth and customer growth since the last base rate proceeding was 15 16 filed in 2021. 17 Document No. 2 of my exhibit shows the trends in customer 18 Α. growth and retail energy sales compared to the projections 19 20 from the company's last base rate proceeding and for the forecasts presented in my direct testimony. 21 22 23 The company's experience over the past three years has been slightly stronger customer growth for the first few years 24 25 and has currently aligned again with the projections in the

company's last base rate proceeding. Customer growth on an 1 actual basis averaged 2.0 percent over the past three years 2 3 versus 1.6 percent that was projected for that period in the last base rate proceeding. This uptick was due to a 4 5 surge in new multi-family, condominiums, and apartments, which peaked in 2022 at over 3 percent growth and has 6 moderated to 1.7 percent in recent months. Energy sales 7 over the past 3 years averaged 1.7 percent versus the 8 projection of 1.0 percent for this period in the last base 9 rate proceeding. The increase of 0.7 percent is primarily 10 11 due to very warm weather. During this period, the company's annual peak demand increased from 4,393 MW to 4,669 MW, or 12 by an average of 3.1 percent per year. 13

The projected average annual growth rates from 2024-2027 15 are similar to the last base rate proceeding. Customer 16 growth is slightly stronger at 1.6 percent versus 1.3 17 percent and energy sales are also projected to be slightly 18 stronger at 0.8 percent versus 0.7 percent. The process 19 20 Tampa Electric uses to prepare its load forecast and the steps it has taken to ensure the forecast is reasonable 21 22 are discussed later in my testimony.

23

14

Q. Please describe the level of inflation experienced since
the last base rate proceeding was filed in 2021.

	1	
1	A.	The recent levels of inflation experienced were
2		significantly higher than what was expected in 2021. In the
3		last rate proceeding, the consumer price index ("CPI") was
4		projected to be 2.5 percent in 2021 and 2.8 percent in 2022.
5		What occurred was an increase in the CPI of 4.7 percent in
6		2021 and 8.0 percent in 2022, declining to 4.1 percent in
7		2023. This represents a 17 percent increase in the average
8		prices paid by consumers over the past three years. Levels
9		this high have not been experienced in over 40 years.
10		
11	TAMP	A ELECTRIC'S FORECASTING PROCESS, METHODOLOGIES AND
12	ASSU	MPTIONS
13	Q.	Please describe Tampa Electric's load forecasting process.
14		
15	A.	Tampa Electric uses econometric models and Statistically
16		Adjusted End-use Forecasting ("SAE") models, which are
17		integrated to develop projections of customer growth,
18		energy consumption, and peak demands. The econometric
19		models measure past relationships between economic
20		variables, such as population, employment, and customer
21		growth. The SAE models, which incorporate an end-use
22		structure into an econometric model, are used for
23		projecting average per-customer consumption. These models
24		have consistently been used by Tampa Electric since 2003,
25		and the modeling results have been submitted to the Florida

Public Service Commission ("Commission") for review and approval in past regulatory proceedings. MFR Schedule F-5, which I co-sponsor, provides a more detailed description of the forecasting process.

1

2

3

4

5

8

Q. Which assumptions were used in the base case analysis of
customer growth?

The primary economic drivers for the customer forecast are Α. 9 Hillsborough County population estimates, Hillsborough 10 11 County Commercial and Manufacturing employment, building permits, and time-trend variables. The population forecast 12 is the starting point for developing the customer 13 and 14 energy projections. The population forecast is based upon the projections of the University of Florida's Bureau of 15 16 Economic and Business Research ("BEBR"). The company supplements these sources with Moody's Analytics 17 projections of employment by major sectors and residential 18 building permits. These economic growth projections drive 19 the forecasted number of customers in each sector. For 20 example, an increase in the number of households results 21 22 in a need for additional services, restaurants, and retail 23 establishments. Additionally, projections of residential building permits are a good indicator of expected increases 24 25 or decreases in local construction activity. Similarly,

commercial and industrial employment growth is a good 1 indicator of expected activity in those respective sectors. 2 3 The ten-year historical and forecasted average annual growth rates for these economic indicators are shown in 4 5 Document No. 3 of my exhibit. 6 7 Which assumptions were used in the base case analysis of Q. energy sales growth? 8 9 Customer growth and per-customer consumption growth are 10 Α. 11 the primary causes for growth in energy sales. The company bases the average per-customer consumption for each revenue 12 class on the SAE modeling approach. The SAE models have 13 14 three components. The first component includes assumptions of the long-term saturation and efficiency trends in end-15 16 use equipment. The second component captures changes in economic conditions, such as increases in real household 17 income, changes in number of persons per household, the 18 price of electricity, and how these factors affect a 19 20 residential customer's consumption level. I provide a complete list of the critical economic assumptions used in 21

9

developing these forecasts in Document No. 3 of my exhibit.

The third component captures the seasonality of energy

consumption. Heating and cooling degree day assumptions

allocate the appropriate monthly weather impacts and are

22

23

24

	1	
1		based on Monte Carlo simulations for weather patterns over
2		the past 20 years. Historical and projected heating and
3		cooling degree days are shown in Document No. 4 of my
4		exhibit. MFR Schedules F-7 and F-8 provide a description
5		and the historical and projected values of each assumption
6		used in the development of the 2025 test year retail energy
7		sales.
8		
9	Q.	Which assumptions were used in the base case analysis of
10		peak demand growth?
11		
12	A.	Peak demand growth is affected by long-term appliance
13		trends, economic conditions, and weather conditions. The
14		end-use and economic conditions are integrated into the
15		peak demand model from the energy sales forecast. The
16		weather variables are heating and cooling degree days at
17		the time of the peak, for the 24-hour period of the peak
18		day, and the day prior to the peak day. Weather variables
19		provide seasonality to the monthly peaks. By incorporating
20		both temperature variables, the model accounts for cold or
21		heat buildup that contributes to determining the peak day
22		demand. Temperature assumptions are based on an analysis
23		of 20 years of peak day temperatures. For the peak demand
24		forecast, the design temperature at the time of winter and
25		summer peaks is 31 and 92 degrees Fahrenheit, respectively.
	l	

Does Tampa Electric assess the reasonableness of these base 1 Q. 2 case assumptions? 3 Yes. The company evaluates the reasonableness of base case Α. 4 5 economic assumptions by comparing the historical average annual growth rates to the projected average annual growth 6 rates for the forecast period. In addition, the company 7 compares each economic data series to an alternate source 8 and evaluates it for consistency. Tampa Electric uses the 9 Office of Economic and Demographic Research (a research 10 11 arm of the Florida Legislature), the U.S. Energy Information Administration, and the University of Central 12 Florida's Institute for Economic Forecasting as alternate 13 14 sources for comparisons. I found that the projections between the sources vary slightly, but the timing of the 15 16 expected economic rebounds is consistent. Therefore, it is reasonable to conclude that the Moody's Analytics economic 17 growth assumptions for Hillsborough County are 18 also reasonable. 19 20 Were the forecasts for population growth also evaluated 21 Ο.

22

A. Yes, the company evaluated the forecasts for population
growth for reasonableness by comparing county and state

for reasonableness?

level projections and evaluating them for consistency. The 1 company also compared the Moody's Analytics and BEBR 2 3 population forecasts and evaluated them for consistency. The BEBR 2025 population growth projections are slightly 4 5 higher than Moody's. BEBR's growth rates are closely aligned with Tampa Electric's recent customer 6 arowth levels. However, to improve the alignment even further, a 7 slight upward adjustment of 0.2 percent was made to BEBR's 8 population growth projections. This adjustment accounts 9 for the surge in the multi-family sector that the company 10 11 experienced in 2022. 12 Please describe the historical accuracy of Tampa Electric's 13 Q. 14 retail customer and energy sales forecasts. 15 16 Α. Since the last rate proceeding in 2021, the average accuracy of the customer forecasts has been remarkable; 17

the three-year average accuracy is 0.2 percent below the actuals.

20

The average accuracy of per-customer consumption over the past three years was 3.0 percent below the actuals, primarily due to the hotter weather in recent years. However, when adjusting for weather, the average percustomer consumption forecasts have been on target at 0.1

1		percent.
2		
3		The resulting average accuracy of the retail energy sales
4		forecasts is 3.2 percent below actuals and 0.1 percent
5		below actual consumption when weather adjusted.
6		
7	Q.	Have Tampa Electric's forecasting models used in developing
8		the customer, demand, and energy forecasts been reviewed
9		for reasonableness?
10		
11	A.	Yes. In 2009 and 2013 Itron, Inc. ("Itron") reviewed Tampa
12		Electric's forecasting models and assumptions. During each
13		review, Itron concluded that the forecast models were
14		theoretically sound. Since then, Tampa Electric has not
15		made any significant changes to its forecasting models and
16		equations.
17		
18		In May of each year, Tampa Electric and the other Florida
19		utilities meet with the Florida Reliability Coordinating
20		Council ("FRCC") to review each utility's forecasting
21		methodologies, assumptions, and results for
22		reasonableness. This is done to ensure that the aggregated
23		utility forecasts are reasonable for the long-term
24		assessments within FRCC's region - peninsular Florida (the
25		geographic area of Florida east of the Apalachicola River).
20		geographic area or riorida east of the Aparachicola River).

Electric presents During these meetings, Tampa its 1 2 forecasting models, assumptions, and results for the FRCC's 3 review. Since 2010, the FRCC has determined the company's forecasting models to be reasonable for use. 4 5 BILLING DETERMINANTS 6 7 Q. The methodology and forecasts described in your direct 8 testimony are on a customer class basis, so how are these forecasts converted to a tariff rate schedule basis for 9 rate design analysis? 10 11 The company converts the output of our customer class 12 Α. models to the tariff rate schedules by conversion models 13 which use billing determinant distribution factors. 14 15 Please explain the term billing determinants. 16 0. 17 The term billing determinants refers to parameters to which 18 Α. prices are applied to derive billed revenues. For example, 19 20 billing determinants include: (1) the number of customers (i.e., bills) to which the customer charges are applied; 21 22 (2) the amount of energy or kilowatt-hours ("kWh") sold to 23 which the energy charges are applied; and (3) the amount of demand or kilowatts ("kW") to which the demand charges 24 are applied. Billing determinants also include the number 25

of units to which any additional charges, discounts, and/or 1 2 penalties are applied. 3 How are billing determinant distribution factors derived? Q. 4 5 The first step is to calculate the historical distribution Α. 6 factors (e.g., the percentage of total residential class 7 customers and energy that are in each residential rate 8 schedule). Next, the company analyzes the trends in these 9 percentages for each rate schedule and bases the future 10 11 distribution factors on the most recent trends. Similarly, the company bases rate schedules that have billing demand 12 charges on historical load factors. 13 14 How are these billing determinants used? 0. 15 16 The forecasted billing determinants are applied to current 17 Α. and proposed rates to calculate the base revenues from the 18 sale of electricity for the 2025 test year. Tampa Electric 19 20 witness Jordan Williams discusses this process in his direct testimony. 21 22 TAMPA ELECTRIC'S FORECAST RESULTS 23 How many customers does Tampa Electric serve? 24 0. 25

1	a	Tampa Electric served an average of 83/ 1// retail
1	д.	Tampa Erectric Served an average of 054,144 retain
2		customers in 2023. Tampa Electric's current number of
3		customers is shown in Document No. 5 of my exhibit.
4		
5	Q.	What is Tampa Electric's projected customer growth?
6		
7	A.	Customer growth in 2023 was 1.8 percent, while projections
8		for 2024 and 2025 are 1.7 percent. The company projects an
9		average annual increase of 12,899 (1.4 percent) new
10		customers over the next ten years (2024-2033). The
11		historical and projected number of customers are shown in
12		Document No. 5 of my exhibit.
13		
14	Q.	How do Tampa Electric's projected customer growth rates
15		compare with historical growth rates?
16		
17	A.	Historical ten-year AAGR for customers is 1.9 percent and
18		projected customer growth rates are 1.4 percent. This
19		projected growth rate represents customer growth of 1.7
20		percent in 2024, slowing to 1.2 percent by 2033. BEBR's
21		population projections drive the lower projected growth
22		rates. The moderation of growth rates over the forecast
23		horizon is not uncommon; it is a consistent trend seen in
24		the company's past Ten-Year Site Plans, as well as in other
25		Florida utilities' Ten-Year Site Plans.

1	Q.	Please describe Tampa Electric's energy sales forecast.
2		
3	A.	The primary cause of the increase in the energy sales
4		forecast is customer growth. The impact of per-customer
5		consumption, which is expected to decrease at an average
6		annual rate of 0.5 percent over the next ten years
7		(2024-2033), offsets some of the customer growth as shown
8		in Document No. 6 of my exhibit. Combining the forecasted
9		customer growth and per-customer consumption trends, Tampa
10		Electric expects retail energy sales to increase at an
11		average annual rate of 0.9 percent over the next ten years
12		(2024-2033). I provide historical and forecasted energy
13		sales in Document No. 7 of my exhibit.
14		
15	Q.	What are the primary causes of the projected decline in
16		average usage?
17		
18	A.	The primary causes of declining average use are (1)
19		improvements in end-use efficiency resulting from
20		appliance and equipment replacement; (2) new end-use
21		standards, such as the new lighting standards that are
22		expected to continue to have a significant impact on
23		residential sales; (3) economy-induced conservation;
24		demand-side management ("DSM") program activity; and (4)
25		the continued addition of rooftop solar panels.

1	Q.	How do the 2025 test year projections for retail energy	
2		sales compare to the same year projections that were	
3		prepared and filed in Tampa Electric's 2021 base rate case?	
4			
5	A.	The current 2025 projection for energy sales growth is 0.7	
6		percent, compared to 0.8 percent in the projection for the	
7		year 2025 that was filed in the 2021 rate case.	
8			
9	Q.	What is Tampa Electric's peak demand forecast?	
10			
11	A.	Tampa Electric projects summer and winter peak usage per	
12		customer will decrease at an average annual rate of 0.3	
13		percent. Document No. 8 of my exhibit shows historical and	
14		forecasted peak usage per customer for summer and winter	
15		peaks. The increase in customers and the decrease in per-	
16		customer demand results in an average annual growth rate	
17		of 1.2 percent over the next ten years for the winter and	
18		0.9 percent for the summer peaks, as shown in Document No.	
19		9 of my exhibit. Summer and winter firm peak demands, which	
20		have been reduced by curtailable load such as load	
21		management and interruptible loads, are shown in Document	
22		No. 10 of my exhibit.	
23			
24	Q.	Are conservation and demand-side management impacts	
25		accounted for in the energy sales and peak demand	

forecasts? 1 2 3 Α. Yes. Tampa Electric develops energy and demand forecasts for each conservation and DSM program. The aggregated 4 5 incremental energy savings and demand impact projections are then subtracted from the forecasts. 6 7 Are the impacts of rooftop solar generation accounted for Q. 8 in the energy sales and peak demand forecasts? 9 10 11 Α. Yes. Tampa Electric's energy sales and peak demand forecasts include the impacts of rooftop solar generation. 12 13 14 Q. Are electric vehicle impacts accounted for in the energy sales and peak demand forecasts? 15 16 Α. Yes. Tampa Electric's energy sales and peak demand 17 forecasts include the impacts of electric vehicle charging. 18 19 20 Q. Has the company performed any sensitivity analyses on its load forecast? 21 22 23 Α. Yes. The company tested the base case scenario for 24 sensitivity to varying economic conditions and customer 25 growth rates. The high and low peak demand and energy sales

scenarios represent an alternative to the company's base 1 case outlook. The high scenario represents more optimistic 2 3 economic conditions in the areas of customers, employment, income. The low band represents less optimistic and 4 5 scenarios in the same areas. Compared to the base case, the expected customer and economic growth rates are 0.5 6 7 percent higher in the high scenario and 0.5 percent lower in the low scenario. 8 9 Electric conclude that the forecasts Q. Does Tampa of 10 11 customers, energy sales, and demand are appropriate and reasonable? 12 13 14 Α. Yes. The customer, demand, and energy sales forecasts are based on assumptions developed by industry experts and are 15 16 the most recent assumptions available at the time the forecasts were prepared. The company used theoretically 17 statistically sound methods that were previously 18 and reviewed and accepted by the Commission to develop the 19 20 forecasts. In addition, the company compared the average annual growth rates for per-customer demand and energy 21 usage for consistency with historical growth rates. We 22 23 reviewed summer and winter load factors to ensure proper integration of the peak and energy models. The results show 24 25 that the load factors are reasonable when compared to

historical years. The load factors are shown in Document 1 No. 11 of my exhibit. The customer, energy sales, 2 and forecasts are 3 demand appropriate and reasonable for planning purposes. 4 5 SUMMARY 6 Please summarize your direct testimony. 7 0. 8 The population of Tampa Electric's service area will Α. 9 continue to grow at a steady pace over the forecast 10 11 horizon. The company expects an average increase in customers of 1.4 percent a year, which is an increase of 12 almost 116,094 by 2033. We expect per-customer demand and 13 14 per-customer energy consumption to continue to decline over the next ten years. As a result, Tampa Electric projects 15 16 retail energy sales will increase at an average annual rate 0.9 percent (1.0 percent excluding the declining 17 of Phosphate sector) over the next ten years. 18 19 20 We conducted reviews of actual energy sales results versus the company's most current forecast for the period June 21 22 2023 to February 2024. After adjusting actual energy sales 23 for weather, the forecast for energy sales was overstated by 0.9 percent. These results confirm that the company's 24 25 forecast is a reliable representation of projected sales.

1		This foregast is the same foregast used for the 2025 test
T		THIS TOTECASE IS the same forecase used for the 2023 test
2		year projections. Tampa Electric used industry "best
3		practice" methods and appropriate and reasonable
4		assumptions to develop our customer, energy sales, and
5		demand forecasts, and they are reasonable for use in this
6		proceeding.
7		
8	Q.	Does this conclude your direct testimony?
9		
10	A.	Yes, it does.
