

Determine where inside your home the UPS battery backup unit will be placed. (Home Office, Livingroom, Etc.)

Decide which devices will require battery backup and which simple require surge protection.

1. Unpack unit

2. Connect unit to outlet.

3. Press Power button to turn on unit. (one long beep)

4 Plug In power cords for all devices (10 Max)

- All devices that require battery back capabilities should be plugged into **Battery+Surge** (Left)
- All devices that require surge only protection should be plugged into **Surge** (Right)

5. Any device that has a coax connection should be plugged in through the UPS unit (Cable Boxes & Modems)

- Coax cable coming from wall receptacle should be plugged into **IN** (Top)
- Coax cable connected to device should be plugged into **OUT** (Bottom)

6. Test your devices
