# Energy- Efficiency Programs

**TECO**

TAMPA ELECTRIC

AN EMERA COMPANY

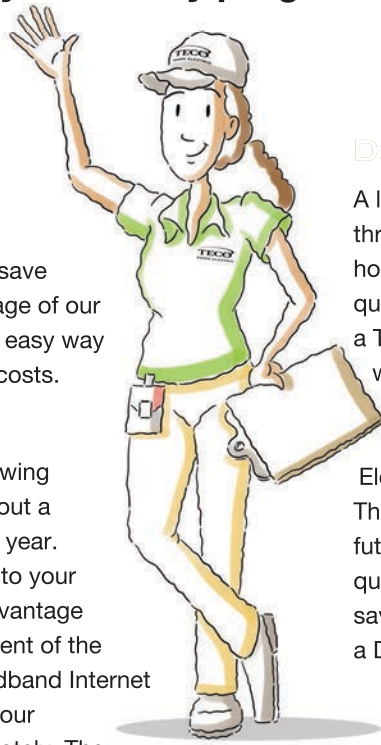

# Tampa Electric is committed to helping customers save energy through free Home Energy Audits and several energy-efficiency programs that offer rebates when energy-saving measures are installed.

## Home Energy Audit

Our free Energy Audit is an inspection of your home that identifies areas where you can save energy. When you take advantage of our recommendations, it can be an easy way to save on your annual energy costs.

## Energy Planner<sup>SM</sup>

Energy Planner is helping a growing number of households save about a month's worth of electricity per year. By making simple adjustments to your electricity use, you can take advantage of lower rates available 87 percent of the time. With access to your broadband Internet connection, you can program your thermostat and appliances remotely. The program is free and we'll show you how to make the most of it.

## Ductwork

A leaky air duct system could send your energy bill through the roof. Our Ductwork program can get your home running more efficiently while improving the quality of your indoor air. A pre-approval inspection by a Tampa Electric energy analyst is required. The analyst will inspect your home's duct system for accessibility and repair needs. If approved, the analyst will provide you with contact information for the Tampa Electric-approved contractor that serves your area. The contractor will seal all leaks and help minimize future leaks – all for only \$80\* that will be recouped quickly from the energy efficiency improvement savings. Call the number on this brochure to schedule a Ductwork appointment.

*\*Having more than one heating & cooling system and extensive repairs or replacement of existing ductwork will result in increased fees.*

## Heating & Cooling

Our Heating and Cooling program lets you earn up to a \$135 rebate when you replace your old, inefficient air conditioning system with a new, energy-efficient system that meets our energy-saving standards. This program is available to all residential customers.

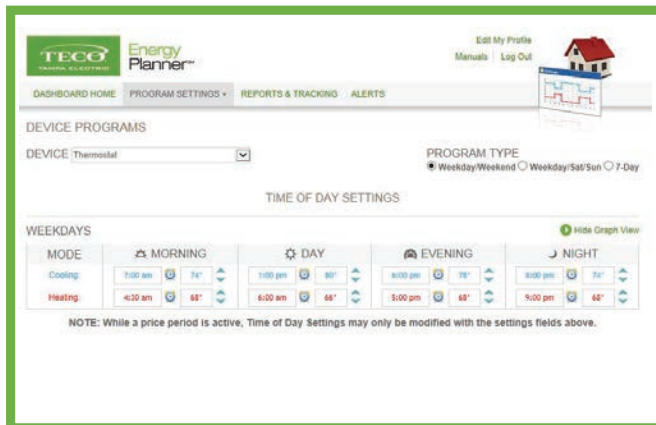

## Window Replacement

Replacing existing windows with energy-efficient windows will help reduce solar heat gain and keep your home cooler. To qualify for a rebate of \$2.20 per square foot, windows must be installed within air-conditioned space and be labeled by the National Fenestration Rating Council (NFRC) to have a minimum Solar Heat Gain Coefficient (SHGC) less than or equal to .35, and a U-factor less than or equal to .60.

## Wall Insulation

Proper insulation levels in exterior walls adjacent to living areas will help reduce demand on your air conditioning and heating system. To qualify for a rebate, the existing structure must have electric whole-house air conditioning or heating. We will pay \$0.11 per square foot of insulation installed. The rebate is available for owner-installed insulation and work performed by a licensed contractor participating in the program. New room additions are not eligible to participate.

## Ceiling Insulation

Poor levels of insulation in your attic will let energy escape, costing you money as well as comfort. Before you install insulation, call Tampa Electric at the number below to schedule a TECO energy analyst attic inspection. If ceiling insulation is recommended, we will pay \$0.14 per square foot of insulation installed. In addition, the analyst will provide you with a rebate certificate that is valid for one year and a list of approved contractors that can perform the work.

## HVAC Motor Replacement

The HVAC Motor Replacement program was developed to improve your home's heating, ventilating, and air conditioning system and enables you to earn a \$115 rebate when you have your existing heating and cooling system retrofitted with a high-efficiency electronically commutated motor (ECM). The high-efficiency EMC is designed to make your system operate more efficiently and help reduce your energy costs. The rebate applies to the installation of a new ECM on a system that does not have a variable-speed motor or an existing ECM.

## Neighborhood Weatherization Program

Our Neighborhood Weatherization program helps qualified customers manage their electricity costs by making their homes more energy efficient. If your home is located within one of the geographic regions identified through the U.S. Census data that qualifies as a low-income community, we will provide and install an energy-saving kit at no cost to you. We will also seal the duct work and install attic insulation in homes that allow access to the attic.
