

Lighting the Way to a Brighter Future

Important information for Tampa Electric's residential customers

Tampa Electric is committed to being your trusted energy-solutions partner now and in the future.

Tampa Electric is asking the Florida Public Service Commission (PSC) to increase rates in January 2022.

If approved, our bills would remain among the lowest in Florida and below the national average. If approved as filed, the typical residential customer, using 1,000 kilowatt-hours, would pay \$125.48 per month.

Improvements for You

The request will:

Increase the generation of clean, green energy and reduces carbon emissions, through the modernization of Big Bend Power Station and additional solar projects.

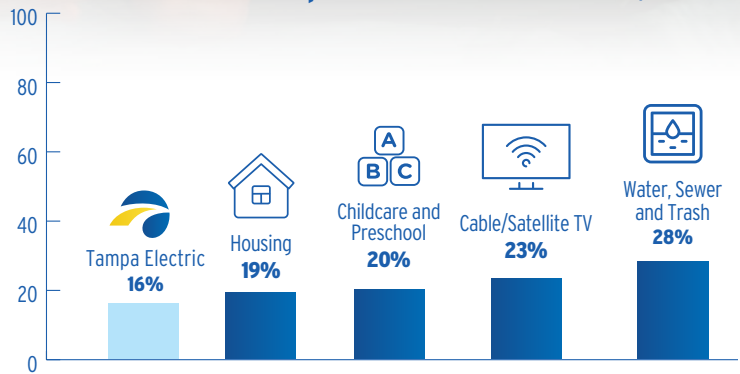

Improve reliability and convenience with grid technology and equipment investments, to keep pace with customers' demands in one of the fastest-growing regions in the nation.

Empower customers through faster outage detection and restoration capabilities, as well as other digital enhancements to provide more convenience and choice.

Household Expense Increases Since 2013

Your Best Value

We are proud to say that our rates have remained stable – and even declined \$3 – since our last rate request took effect in 2013. Since then, we have improved reliability, provided more customer solutions and kept bills low, which increased overall customer satisfaction.

We're Here to Help

We are empathetic to customers who are facing hardships, which is why we developed programs and partnerships to offer utility bill payment support for those in need.

We remain committed to investing in our community while providing you with safe, reliable, affordable and clean energy every day.
